1 Figures

Figure 1: A basis set convergence graph showing how the energy converges with increasing basis set size for the conjPW91 functional.

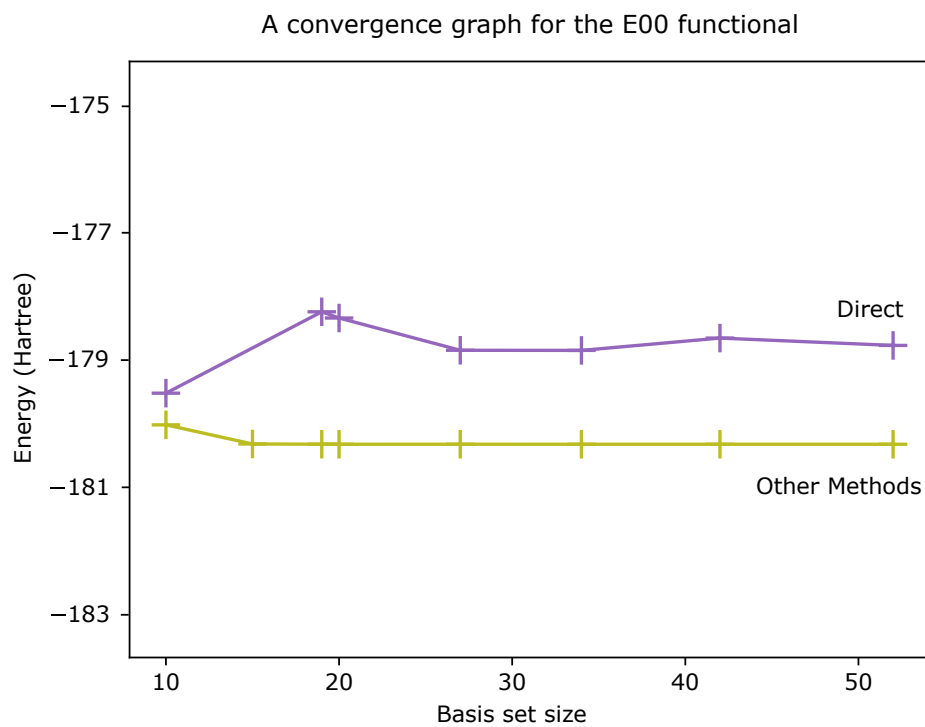

Figure 2: A basis set convergence graph showing how the energy converges with increasing basis set size for the E00 functional. Results for acevedo, basin hopping, CCH, differential evolution, dual annealing, TRIM, DIRECT+TRIM and TRIM+repeats are visually indistinguishable on this plot and are labelled together as "other methods".

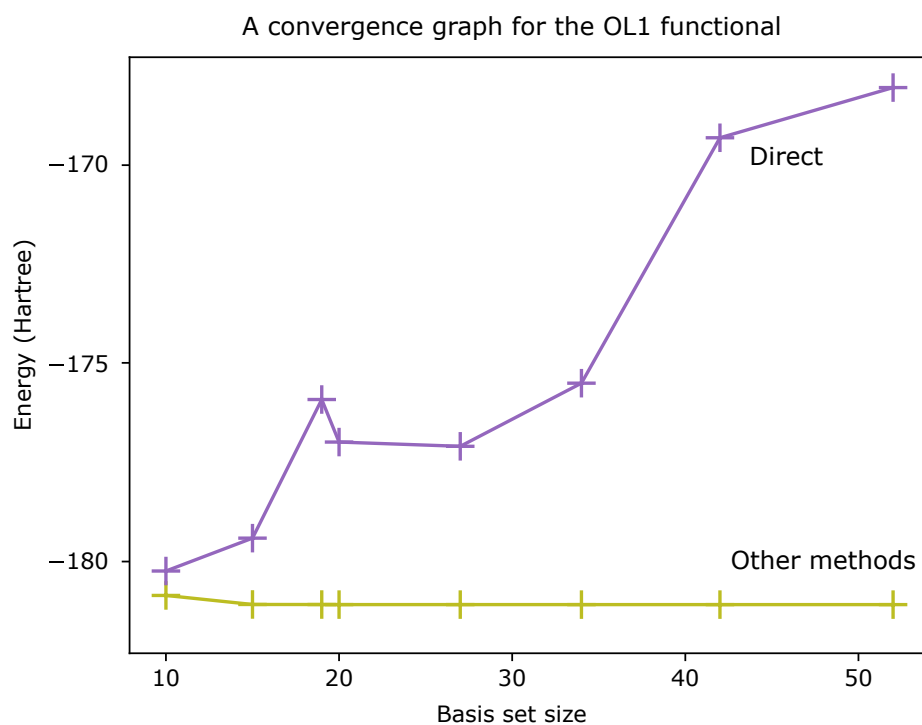

Figure 3: A basis set convergence graph showing how the energy converges with increasing basis set size for the OL1 functional. Results for acevedo, basin hopping, CCH, differential evolution, dual annealing, TRIM, DIRECT+TRIM and TRIM+repeats are visually indistinguishable on this plot and are labelled together as "other methods".

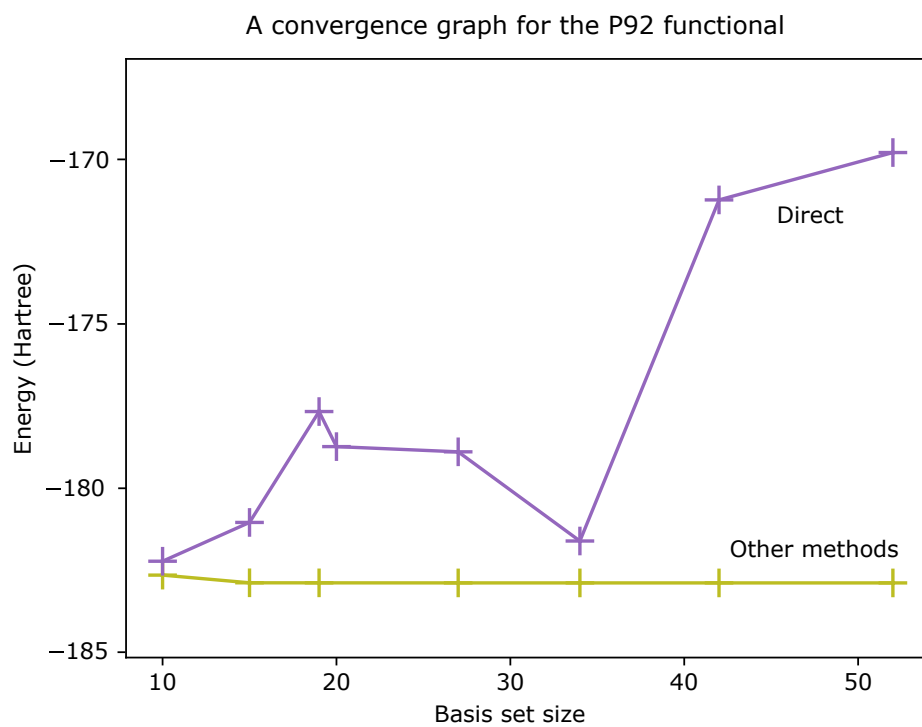

Figure 4: A basis set convergence graph showing how the energy converges with increasing basis set size for the P92 functional. Results for acevedo, basin hopping, CCH, differential evolution, dual annealing, TRIM, DIRECT+TRIM and TRIM+repeats are visually indistinguishable on this plot and are labelled together as "other methods".

Figure 5: A basis set convergence graph showing how the energy converges with increasing basis set size for the TF + $0.2 \times VW$ + LDA functional. Results for acevedo, basin hopping, CCH, differential evolution, dual annealing, TRIM, DIRECT+TRIM and TRIM+repeats are visually indistinguishable on this plot and are labelled together as "other methods".

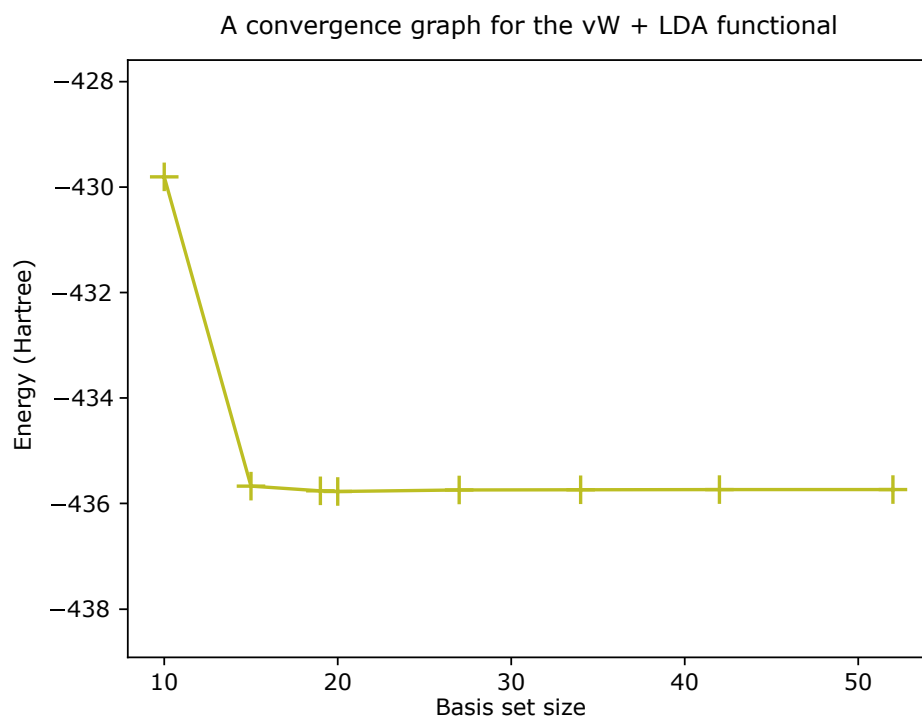

Figure 6: A basis set convergence graph showing how the energy converges with increasing basis set size for the VW + LDA functional. All methods are represented except CCH which had incomplete results for this functional.
